

fails while measuring

Fabricated measurement

- Heuristic proxy logged as a detection
- Confident pass built from a missing record
- Hardcoded fallback output on empty input

fails while reporting

Unvalidated constants

- Authored similarity thresholds
- Arbitrary telemetry cut-offs
- Confidence reported without calibration

Opaque aggregation

- Composite score over hidden weights
- Ranking a candidate cannot contest
- Evidence discarded at design time

Provenance gaps

- Identity checked once, assumed after
- Process data captured but never used
- Unmeasured interval read as a pass
